

## /// Datasheet

# CLTE-AT™ Circuit Materials

## Excellent Dimensional Stability

## High Degree of Phase Stability vs. Temperature

CLTE-AT™ laminates represent the commercial version of the CLTE™ product line. CLTE-AT laminates use the common building blocks developed with CLTE-XT™ laminates, but with some changes to make the product more affordable. This results in a higher dielectric constant (3.00) and a slightly different thickness than the CLTE-XT laminates.

CLTE-AT micro dispersed ceramic PTFE composites utilize a woven fiberglass reinforcement to provide the highest degree of dimensional stability, critical in multilayer designs. CLTE-AT laminates are in a “League of their Own” for registration when utilizing thin substrates (i.e. 0.005” and 0.010”).

CLTE-AT laminates have “Best-in-Class” Insertion Loss (S21) and Loss Tangent (0.0013) in the commercial marketplace and second only to CLTE-XT laminates.

Rogers’ CLTE-AT laminates were designed to provide a quality peel strength without having to resort to the utilization of the lossier, rougher coppers prevalent in competitive products to achieve acceptable copper adhesion.

CLTE-AT laminates have Low CTE xyz and Very Low TCER for applications that require Electrical Phase Stability, Dk Stability, and Mechanical Stability well over a -55 to 150°C Operating Temperature. CLTE-AT laminates continue the competitive advantages of CLTE laminates (dimensional stability, low absorption of moisture and processing chemicals, ease of processability). The higher thermal conductivity of CLTE-AT laminates improve heat transfer relative to alternative materials and enable better power handling.

### /// Features and Benefits:

Superior signal integrity

- Ceramic/PTFE Microwave Composite
- Mechanically more robust and more dimensionally stable than alternatives
- Lowest Insertion Loss in Commercial Class

Excellent thermal/mechanical performance characteristics

- Very Low Loss Tangent (0.0013)
- Electrical Phase Stability vs. Temperature
- High Thermal Conductivity
- Tight Dielectric Constant ( $\pm 0.04$ ) and Thickness Tolerance

Woven glass reinforcement

- Excellent Thermal Stability of Dk and Df
- Phase Stability across temperature
- High Degree of Dimensional Stability required for complex, multilayer boards
- Excellent CTE in X,Y and Z

### /// Typical Applications:

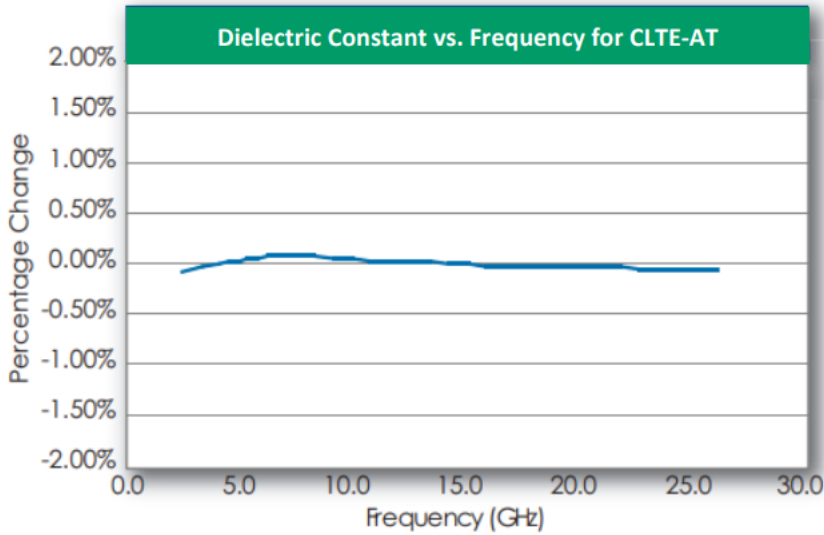

- Automotive Radar & Adaptive Cruise Control Applications
- Microwave/RF Applications
- Phase/Temperature Sensitive Antennas
- Phase Sensitive Electronic Applications
- RF and Microwave Filters

## Standard Properties Table

Properties		Typical Values <sup>1</sup> CLTE-AT	Units	Test Conditions		Unit
<b>Electrical Properties</b>						
Dielectric Constant		3.00	-	23°C @ 50% RH	10 GHz	IPC TM-650 2.5.5.5
Dissipation Factor		0.0013	-	23°C @ 50% RH	10 GHz	IPC TM-650 2.5.5.5
Thermal Coefficient of Dielectric Constant		-10	ppm/°C	0 to 100°C	10 GHz	IPC TM-650 2.5.5.5
Volume Resistivity		4.25 X 10 <sup>8</sup>	Mohm-cm	C-96/35/90	-	IPC TM-650 2.5.17.1
Surface Resistivity		2.02 X 10 <sup>8</sup>	Mohm	C-96/35/90	-	IPC TM-650 2.5.17.1
Dielectric Breakdown			kV	-	-	IPC TM-650 2.5.6
Arc Resistance		250	sec	-	-	IPC TM-650 2.5.1
<b>Thermal Properties</b>						
Decomposition Temperature (Td)		529	°C	-	5% Weight Loss	IPC TM-650 2.4.24.6
Coefficient of Thermal Expansion - x		8	ppm/°C	50°C to 150°C		IPC TM-650 2.4.41
Coefficient of Thermal Expansion - y		8	ppm/°C			IPC TM-650 2.4.41
Coefficient of Thermal Expansion - z		20	ppm/°C			IPC TM-650 2.4.41
Thermal Conductivity		0.64	W/(m·K)	-	z direction	ASTM E1461
<b>Mechanical Properties</b>						
Copper Peel Strength after Thermal Stress		1.3 (7)	N/mm (lbs/in)	10s @288°C	35 µm foil	IPC TM-650 2.4.8
Young's Modulus		1790 (260)	MPa (ksi)	-		IPC TM-650 2.4.18.3
Tensile Strength (MD, CMD)		48, 30 (7.0/4.4)	MPa (ksi)	-		IPC TM-650 2.4.18.3
Flexural Strength (MD, CMD)		101, 54 (14.6, 7.8)	MPa (ksi)	-		IPC TM-650 2.4.4
Compressive Modulus		244	ksi	-		ASTM-D-3410
Poisson's Ratio		0.17		-		ASTM D-3039
<b>Physical Properties</b>						
Flammability		V-0	-	-	C48/23/50 & C168/70	UL 94
Moisture Absorption		0.03	%	E1/105+D24/23	-	IPC TM-650 2.6.2.1
Density		2.06	g/cm <sup>3</sup>	C-24/23/50	Method A	ASTM D792
NASA Outgassing	Total Mass Lost	0.04	%	-	-	NASA SP-R-0022A
	Collected Volatiles	0.00	%	-	-	
	Water Vapor Recovered	0.00	%	-	-

Property Charts

**Figure 1**

Demonstrates the stability of dielectric constant across frequency. This information was correlated from data generated by using a free space and circular resonator cavity. This characteristic demonstrates the inherent robustness of Rogers' laminates across frequency, thus simplifying the final design process when working across EM spectrum. The stability of the dielectric constant of CLTE-AT laminates over frequency ensures easy design transition and scalability of design.

**Figure 2**

Demonstrates the stability of dissipation factor across frequency. This characteristic demonstrates the inherent robustness of Rogers' laminates across frequency, providing a stable platform for high frequency applications where signal integrity is critical to the overall performance of the application.

Resonant cavity methods yielded slightly lower dissipation factor results than IPC 650-TM 2.5.5.5. Df across 1.8 GHz to 25.6 GHz averaged 0.0011 in the Z-Axis. Dielectric loss best correlates with Z-Axis (Efield perpendicular to the board) as the signal propagation down the length of the board maintains the E-Field perpendicular to the plane of the board (right hand rule), such as a microstrip or stripline design.

**Figure 3**

Dk/Temperature curve shows the unique thermal stability properties of CLTE-AT materials when thermocycled over temperature. Even over a wider temperature variation, the material retains its ultra-stable dielectric constant characteristics. This feature is critical to phase sensitive devices, and phase fed apertures that must perform over a wide temperature range.

**Figure 4**

This Df/Temperature curve shows the unique thermal stability properties of CLTE-AT materials when thermocycled over temperature.

### Standard Offerings

Standard Thicknesses	Standard Panel Sizes	Standard Claddings
0.005" (0.13 mm) ± 0.0005" 0.010" (0.254 mm) ± 0.0010" 0.020" (0.508 mm) ± 0.0015" 0.030" (0.762 mm) ± 0.0020" 0.060" (1.52 mm) ± 0.0030"	18" X 12" (475 X 305mm) 18" X 24" (475 X 610mm)	<u>Electrodeposited Copper Foil</u> 1/2 oz. (18µm) 1 oz. (35µm)  <u>Reverse Treated Electrodeposited Copper Foil</u> 1/2 oz. (18µm) 1 oz. (35µm)
