RO4450F™ and RO4460G2™ Bondply

The RO4400™ bondply family is comprised of several grades based on the RO4000 series core materials, and are compatible in multi-layer constructions with RO4000 laminates. A high postcure Tg makes RO4400 series bondply an excellent choice for multi-layers requiring sequential laminations as fully cured RO4400 bondplys are capable of handling multiple lamination cycles. In addition, FR-4 compatible bond requirements permit RO4400 bondply and low flow FR-4 bondply to be combined into non-homogeneous multi-layer constructions using a single bond cycle.

RO4450F™ bondply has demonstrated improvement in lateral flow capability and is becoming the first choice for new designs or as a replacement in designs that have difficult fill requirements. RO4460G2™ bondply provides designers with a 6.15 Dk bonding layer that, just as the other RO4400 bonding materials, exhibits excellent Dk control while maintaining a low z axis expansion for plated through hole reliability. Each of the bondplys are recognized by Underwriter Laboratories with the UL 94 V-0 flame rating, and are compatible with lead-free processes.

\\\ Features and Benefits:

Prepreg grades based on RO4000 series core materials

- Compatible in mulitlayer board constructions with RO4003C, RO4350B, RO4835, RO4350G2, and RO4000 LoPro laminates

Low z-axis coefficient of thermal expansion ranging from 43 to 60 ppm/°C

- CAF resistant

Sequential lamination capable

- High frequency thermoset prepreg compatible with FR-4 bond temperatures

Lead free solder processing compatible

- High reliability plated through-hole

\\\ Typical Applications:

- Backhaul Radios
- Communications Systems
- Power Amplifiers
- Small Cells/DAS
